

DIAGNOSTIC EQUIPMENT

VETARIO INTENSIVE CARE T50M

- **Vetario T50M Intensive Care Unit**

The medical ('M') version of the S50 has a number of additional features which makes it more flexible and better suited to veterinary applications:

- Oxygen compatibility: The M version is fitted with an oxygen connector and can be safely operated with increased oxygen concentrations to aid recovery
- Drugs can be conveniently administered to the patient using the supplied medicine reservoir connected to your nebuliser pump (suitable nebuliser pumps are available from your Vetario distributor)
- Observation of patients is aided by a switchable internal light which safely illuminates the chamber interior
- The control system includes audible and visual warning of temperature fluctuations outside user-defined limits. The alarm is also triggered by power failure; once power is restored it will warn that control has been lost while power was off
- The digital display shows the humidity level as well as temperature within the chamber. The optional EX Humidity Pump can be fitted to provide fully automatic humidity control if required. The T Model has an O2 port and the S Model has a provision for one but no port.
